

Integrating Japanese hospitality
and cutting-edge medicine

National Center for Global Health and Medicine

The nation's leading international general hospital,
providing a wide range of specialized medical care.

Medical interpreting available in 19 languages

43 Clinical Departments

Cancer Treatment

Robot-assisted Treatment

Genomic Medicine

The nation's top advanced and specialized medical center

and Welfare. We are also the only national research center with comprehensive medical facilities. We have a long history dating back to the Meiji era (1868) and were ranked one of the 100 World's Best Hospitals by Newsweek International in April 2023. Our International Health Care Center was established to advance the health care of international patients, and we have received the Japan Medical Service Accreditation for International Patients (JMIP) and are recommended as a Japan International Hospital. Know that when you visit us you will be in good hands.

We are one of six national advanced and specialized medical research centers, and the only one under the jurisdiction of the Ministry of Health, Labour,

We are equipped with the latest medical devices including MRI, CT, and PET.

Accepting global patients, Certified by JMIP

(Japan Medical Service Accreditation for International Patients)

We have medical interpreters available in English, Chinese, Vietnamese, Nepali, and Burmese as part of a direction from the Minister of Health, Labour, and Welfare to enhance our hospital's facilities and open them to the world. There is also a concierge on the ward for international patients who is available to accommodate patients' requests.

Areas of Care

We have 43 departments spanning both internal medicine and surgery, with a system to ensure doctor and staff coordination across all specialties. This allows us to treat a wide range of conditions, from cardiac disease to cancer, with treatments such as intravascular treatment, chemotherapy, and tumor resection.

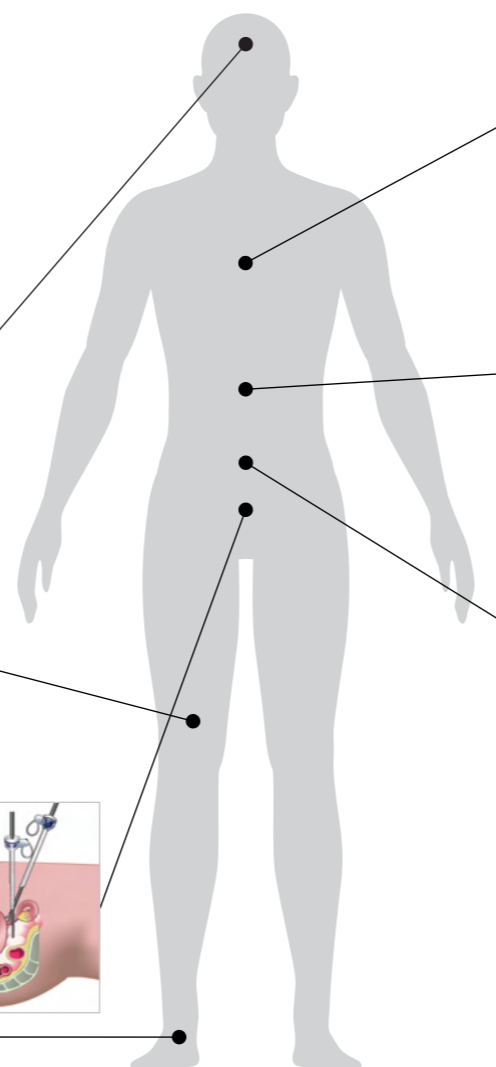

We have 43 departments spanning both internal medicine and surgery, with a system to ensure doctor and staff coordination across all specialties. This allows us to treat a wide range of conditions, from cardiac disease to cancer, with treatments such as intravascular treatment, chemotherapy, and tumor resection.

Neurosurgery
Intravascular Treatment

Laser therapy for varicose veins in the legs

Plastic and Reconstructive Surgery

Total hysterectomy without abdominal incisions (vNOTES)

Thoracoscopy and Laparoscopic Surgery

Sleeve Gastrectomy for Severe Obesity

Robot-assisted Surgery Da Vinci Surgery

In addition to regular treatment we use robot-assisted surgery for diseases of the prostate, colon, lungs, and more. Robot-assisted surgery uses smaller incisions, putting less stress on the body and allowing patients to return home to their normal life more quickly.

We also provide genomic medicine.

We can use a blood sample to examine the genes of you or your family members to see if any show a propensity for breast cancer, ovarian cancer, high cholesterol, and among others.

(The decision to do such tests is made depending on the condition of the patient and their family.)
